S850
iPhone Duo Installation

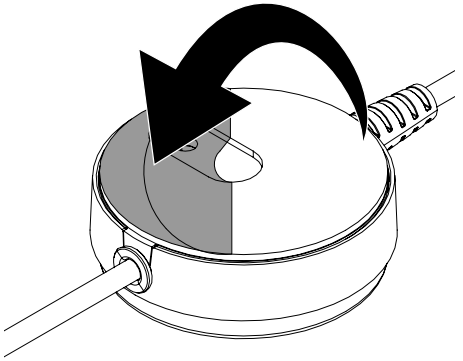

Important:
InVue's handheld device polish kit (ADH2300 or ADH2313) is required for proper adhesion between the display device and the security stand.
The polish kit contains micro-abrasives, that prepare the device surface for proper adhesion on a microscopic level.
When the polish kit (micro-abrasive) is properly applied, it is typical that a visible change to the surface is not apparent, however the surface properties are altered to support the required adhesion.
Consult the instructions included with the polish kits for proper usage.

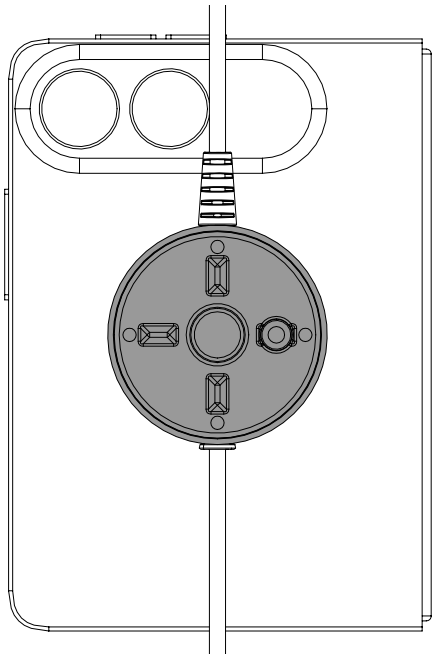

1. Use an alcohol wipe to clean the back of the device with the cameras. Allow it to dry completely.

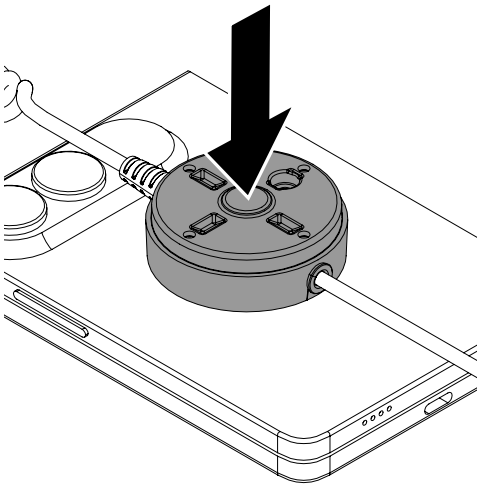

2. Remove the clear film from the DCD208 sensor adhesive.

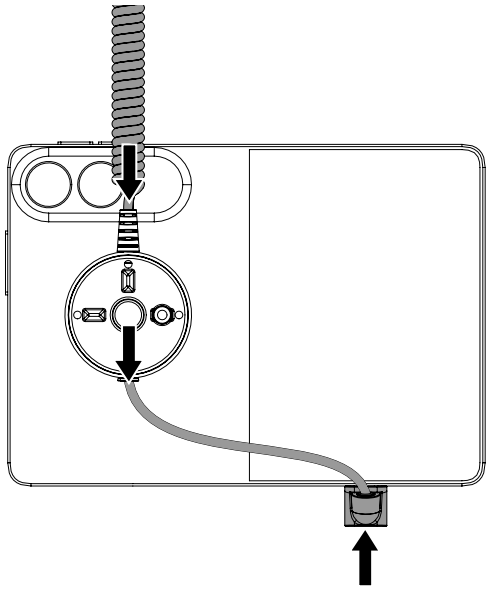

3. Center the sensor medallion onto the camera side of the device.

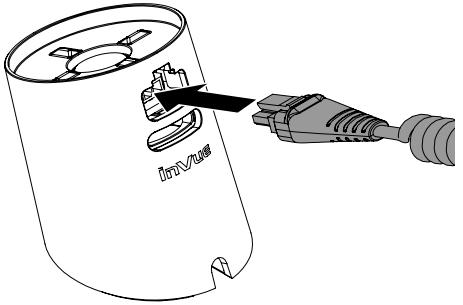

4. Press the sensor against the device for at least 10 seconds.

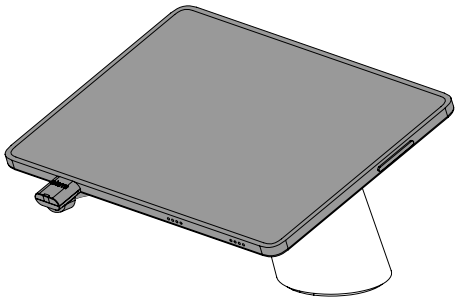

5. Open the device and pull the power cable through the sensor medallion so that the power connector can be plugged into the device.

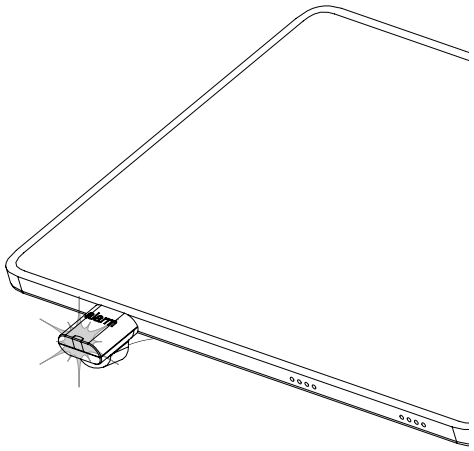

6. Plug the sensor cable into the device.

7 Place the sensor and device onto the stand.

8 The system is armed if Power Connector LED is illuminated.
